

CASE STUDY IBSTOCK BRICK LTD

Project: Demolition Of Former Brickworks - St. Helens
Client: Istock Brick Ltd
Date: November 2009

The project comprised the dismantling, demolition and removal from site of all machinery, equipment and buildings, including asbestos sheeting, waste oil, other contaminated materials and protruding kiln car rails. The buildings and equipment were demolished to floor slab level and voids filled with clean hardcore and blinded with sand.

The importance of the project to Ron Hull Demolition Ltd was not so much the complexity of the work, but the fact that this was the first project for Istock Brick Ltd, and we were seeking to develop the client/contractor relationship in order to secure future opportunities.

It is our ability to quickly assess the client's requirements and be in a position to offer a "one stop" facility that gives us an edge on the competition, coupled with our track record of completing to time and to cost.
