

## **CASE STUDY** VOSPER MANTECH

**Project:** Dismantling Of Radial Dish Satellite Antenna  
**Client:** Vosper Mantech - Morewenstow, Cornwall  
**Date:** January 2007

The project involved a combination of demolition and dismantling to remove the redundant structure.

Initial works involved removal of the radial dish using high reach excavator/shear.

The rotating head weighed 168t and was lifted down using a 650t mobile crane during torrential rain.

Piecemeal dismantling was effected to remove the tower.

All activities were controlled by MOD security conditions.
